For Immediate Release

There's more to us than our smell!

Bio-Productions will be featuring some of their range of environmentally sympathetic cleaning and maintenance products at InterClean on stand 01.227i

Since introducing their biological washroom cleaners, Bio-Productions have become Green Heroes, enabling others to save water while resolving washroom maintenance problems.

The concept of a biological urinal block is now emulated by many but only Toss Blocks – the original biological urinal block contain the technology to perform as they should. Curing odour is only part of the story and Toss Blocks provide the whole package, with calcium and organic bio-degradation preventing blockages as well as curing odours.

Bio-Productions manufacture a full range of biological cleaning products to address all types of cleaning and maintenance problems. Unlike the one-cure-fits-all philosophy, they contain specially blended cultures to prevent odours, remove stains and even remove uric crystals and calcium from carpets and hard flooring.

Bio-Productions also manufacture the XOLA range of professional floor care. These highly respected seals, polishes strippers & maintainers provide total protection and are available to distributors and chemical supply companies wishing to provide this proven technology to their customers and clients.

Whatever your clients cleaning problem, we have a more user friendly, cost effective and environmentally acceptable solution that works ... *naturally*.

We look forward to seeing you on stand 01.227i
