

Carpet and Fabric Protection

Sta-protector

An aqueous based, fully polymerised fluorocarbon protection treatment that provides soil and stain resistance to wet-cleanable carpets and upholstery fabrics. A ready-to-use, non-toxic application that does not adversely affect rubber and latex backings. Suitable for use on all fibres with the exception of polypropylene and some modern acrylics.

Product code: STAPROT5

Solvent Based Fabric Protector

A quick drying, solvent based, fully polymerised fluorocarbon protection treatment for carpets. Especially formulated to protect upholstery, wall fabrics, curtains, rugs and other furnishings from staining. Solvent Protector is also an excellent waterproofing agent for outer garments and accessories.

Product code: SFP5

Anti-Static Treatment

A surface-active water-soluble liquid that minimises static discharges and increases electrical conductance of carpets, particularly man-made or mixed fibres. Treatment also helps reduce re-soiling of man-made fibres, prolonging periods between cleaning.

Product code: ASC

Flame Retardants

Both Flame Retardant formulations are manufactured to BS 5438 (1976) and BS476

Flame Retardant No. 1

Formulated for treating all natural and mixture (wool/man-made) curtain and upholstery fabrics, including cotton, velour, rayon, natural-fibre wall coverings (hessian etc.), rugs and carpets, by pressure spray, brush application and dip impregnation.

Product code: FR1

Flame Retardant No. 2

Formulated for treating synthetic curtain and upholstery fabrics, wall fabrics, rugs, carpets including rayon, (but excluding dralon) by pressure spray, brush application and dipping.

Product code: FR2
